First 5 Minutes - Install Checklist

This is the printable checklist for Module 1. The first six steps get you from a fresh machine to a working hosted brain reading and writing on your own subdomain. If a step fails, do not move past it - debug, fix, then continue. Time-on-task is real five minutes if everything is wired correctly.

Step 1 - Confirm your subscription is active

- Receipt email from the AI Pocket Agency checkout received.
- Magic link email landed in inbox (check spam if missing).
- Magic link clicked - dashboard loaded at <your-handle>.brain.aipocketagency.com.

Step 2 - Pick your handle

- Onboarding wizard opened on first dashboard load.
- Handle chosen. Lowercase, alphanumeric, dashes only. Permanent for Phase 1.
- Subdomain confirmed live - reload page; address bar shows <handle>.brain.aipocketagency.com.

Step 3 - Verify your seeded brain

- File tree shows CLAUDE.md, AGENTS.md, MEMORY.md.
- File tree shows Daily_Log.md, Decision_Log.md, Change_Log.md, Feature_Inventory.md.
- memory-types/ folder visible with user.md, feedback.md, project.md, reference.md.

Step 4 - Generate your first API key

- Settings -> API Keys -> Issue Key clicked.
- Key name set (e.g. "Claude Code on laptop").
- Full key copied immediately - shown only once.
- Key prefix visible in the keys list with timestamp.

Step 5 - Wire your first agent

- Env vars APA_BRAIN_API_KEY, APA_BRAIN_API_HOST, APA_BRAIN_HANDLE saved to shell config.
- Shell reloaded; echo \$APA_BRAIN_API_KEY shows the key prefix.
- ~/.claude/CLAUDE.md created with the global instructions snippet.
- Test request: curl -H "Authorization: Bearer \$APA_BRAIN_API_KEY" \$APA_BRAIN_API_HOST/v1/me returns your handle.

Step 6 - Write your first memory

- Dashboard MEMORY.md opened.
- Append memory entry submitted with one real fact about your business.
- Entry visible at top of MEMORY.md after submit.

■ New Claude Code session started; agent confirmed brain context loaded.

*If you finished all six steps, your hosted brain is live, your agent is wired, and your first memory is written.
Move to Module 2.*
