

MODULE 2 - CONVENTIONS

Wrong vs. Right - Gallery

Ten before-and-after examples sanitized from working brains.

Version: v1 - 2026-05-09

Author: Chase Whited / Whited Consulting

Wrong vs. Right - Gallery

Ten real before-and-after examples, sanitized. Every "wrong" version is something a working brain rejected and every "right" version is what got committed in its place. Read across the page - left is the wrong way, right is the way that holds up six months later.

1. Daily Log entry

Wrong	Right
Did some work on the project today. Made some good progress. More tomorrow.	## 2026-05-09 - Onboarding wizard step 4 wired Commit a1b2c3d on main of apa-brain-app. Step 4 (first memory entry) wires POST /v1/brain/memory on submit; entry appears in MEMORY.md immediately. Build passes. Browser smoke test passed end-to-end on the staging tenant.

2. Memory entry - vague preference

Wrong	Right
## 2026-05-09 - Prefer concise outputs I like things to be concise.	## 2026-05-09 - Reply length default Replies under 150 words unless I ask for more. Bullets only when they earn their keep. Phone-readable paragraphs over walls of text.

3. Decision Log - missing alternatives

Wrong	Right
Decision: We will use Supabase for the database. It is good and easy.	Decision #14 - 2026-05-09 - Single Supabase project, RLS-scoped per tenant. Alternatives: Project-per-tenant (rejected on cost - linear scaling unworkable past founding 50). Sharded Postgres on a self-managed cluster (rejected on operational burden). Rationale: cost, ops simplicity, and RLS pattern is already validated on BOS Hosted. Risk: misconfigured policy is a cross-tenant leak - mitigated by the Phase 0f assertion harness.

4. Feature Inventory - silent overclaim

Wrong	Right
Onboarding wizard full a1b2c3d 2026-05-09	Onboarding wizard partial a1b2c3d 2026-05-09 step 5 confetti screen still pending; rest verified end-to-end

5. Commit message

Wrong	Right
fix stuff	[2026-05-09] Claude Code - fix: notify-parent-booking sent=null PostgREST violation

6. Memory entry - stale plan

Wrong	Right
## 2026-05-09 - Plan to launch in Q3 We are planning to launch in Q3.	## 2026-05-09 - Phase 1 scope Phase 1 covers signup -> dashboard -> first memory. Anything outside that loop is Phase 1.5 or Phase 2+. (Note: launch dates do not belong in MEMORY.md - they go in the project plan doc and roll up to the daily log when they ship.)

7. Verification claim

Wrong	Right
Shipped. Tested. Works.	Shipped. Verified at the SQL/RLS layer (every UPSERT path the user hits via the form succeeded with their auth context) and pnpm build passes. Browser smoke test NOT performed - end-to-end browser verification is on Chase to confirm tomorrow.

8. Handoff doc - missing brain pointers

Wrong	Right
Hey Claude, can you keep working on the dashboard? Thanks.	## Handoff - Codex -> Claude - 2026-05-09 - dashboard retrofit Brain context to read: CLAUDE.md, AGENTS.md, memory-types/project.md, Daily_Log.md (last 3 entries), Change_Log.md (last 5 commits). What I shipped: a1b2c3d (subdomain middleware), 9876abc (auth gate). What's next: lane 3 item 12 - post-milestone sequence picker. Verification: lane-report and disk and remote ✓. Browser smoke test NOT performed.

9. CLAUDE.md update - silent overwrite

Wrong	Right
(diff replaces a paragraph in section 3 with no context)	Section 3 updated to reflect the May 9 architecture lock. Prior paragraph kept as a struck-through line for context. Daily_Log.md entry appended explaining the edit. Decision_Log.md Decision #15 logs the architecture lock with alternatives.

10. Memory entry - too long

Wrong	Right
## 2026-05-09 - On the topic of how I like to work (eight paragraphs about working style, project history, philosophy, and a tangent about a vacation)	## 2026-05-09 - Working hours Standard block is 8a-6p Central. Outside that window I am async-only. (See workflows/working-style.md for the longer doc.)
